FACTORS AFFECTING TEACHING LEARNING PROCESS

- There are three things which are involved in teaching-learning process i.e. Teacher, Student and Learning Environment.
- **Intellectual Factors:** those who are excellent in academic performance have no difficulty in mastering school work. However, some students are unable to do it due to intellectual disabilities.
- **Learning Factors:** having mastery over the subject is one of the major factors which affects learning factors. It affects the student's learning power and performance.
- If a teacher has good mastery over subject the student will understand and perform good. If he/she doesn't it will negatively affect the student's performance.
- **Physical Factors:** the visuals, health issues and physical defects and development affects the teaching learning process excessively. **For example Malnutrition.**

- **Attitude Factors:** Attitude determines the general behavior of the student. It shows the ability and willingness of the student to learn and grasp the knowledge which affects the learning process. Attitudes like openness, loyalty, affection, joy, willingness can always modify the learning behavior.
- **Environmental Factors:** it plays as an important factor in the teacher student learning process. It gets affected by classrooms, textbooks, equipment, fellow mates and other instructional materials etc.
- **Teacher's Personality:** it is one of the most crucial factors that affects the teacher learning process. The vital areas like leading, inspiring, guiding and adapting influence the process. Therefore, it plays an important part in success or failure of the learner.
