

AI

(Add some data preferably)

While AI systems can perform tasks more efficiently than humans, they often lack the ethical judgment, empathy & contextual understanding that human decision-makers bring to complex situations.

* Regulatory framework

As per a paper by PM-EAC

AI presents emergent, non-linear risks as opposed to static systems

↓
Akin to stock market

Complex Adaptive System (CAS)

↓
Establish guard rails

↓
choke points or manual override for defined hazardous situations

↙
circuit breakers kinda

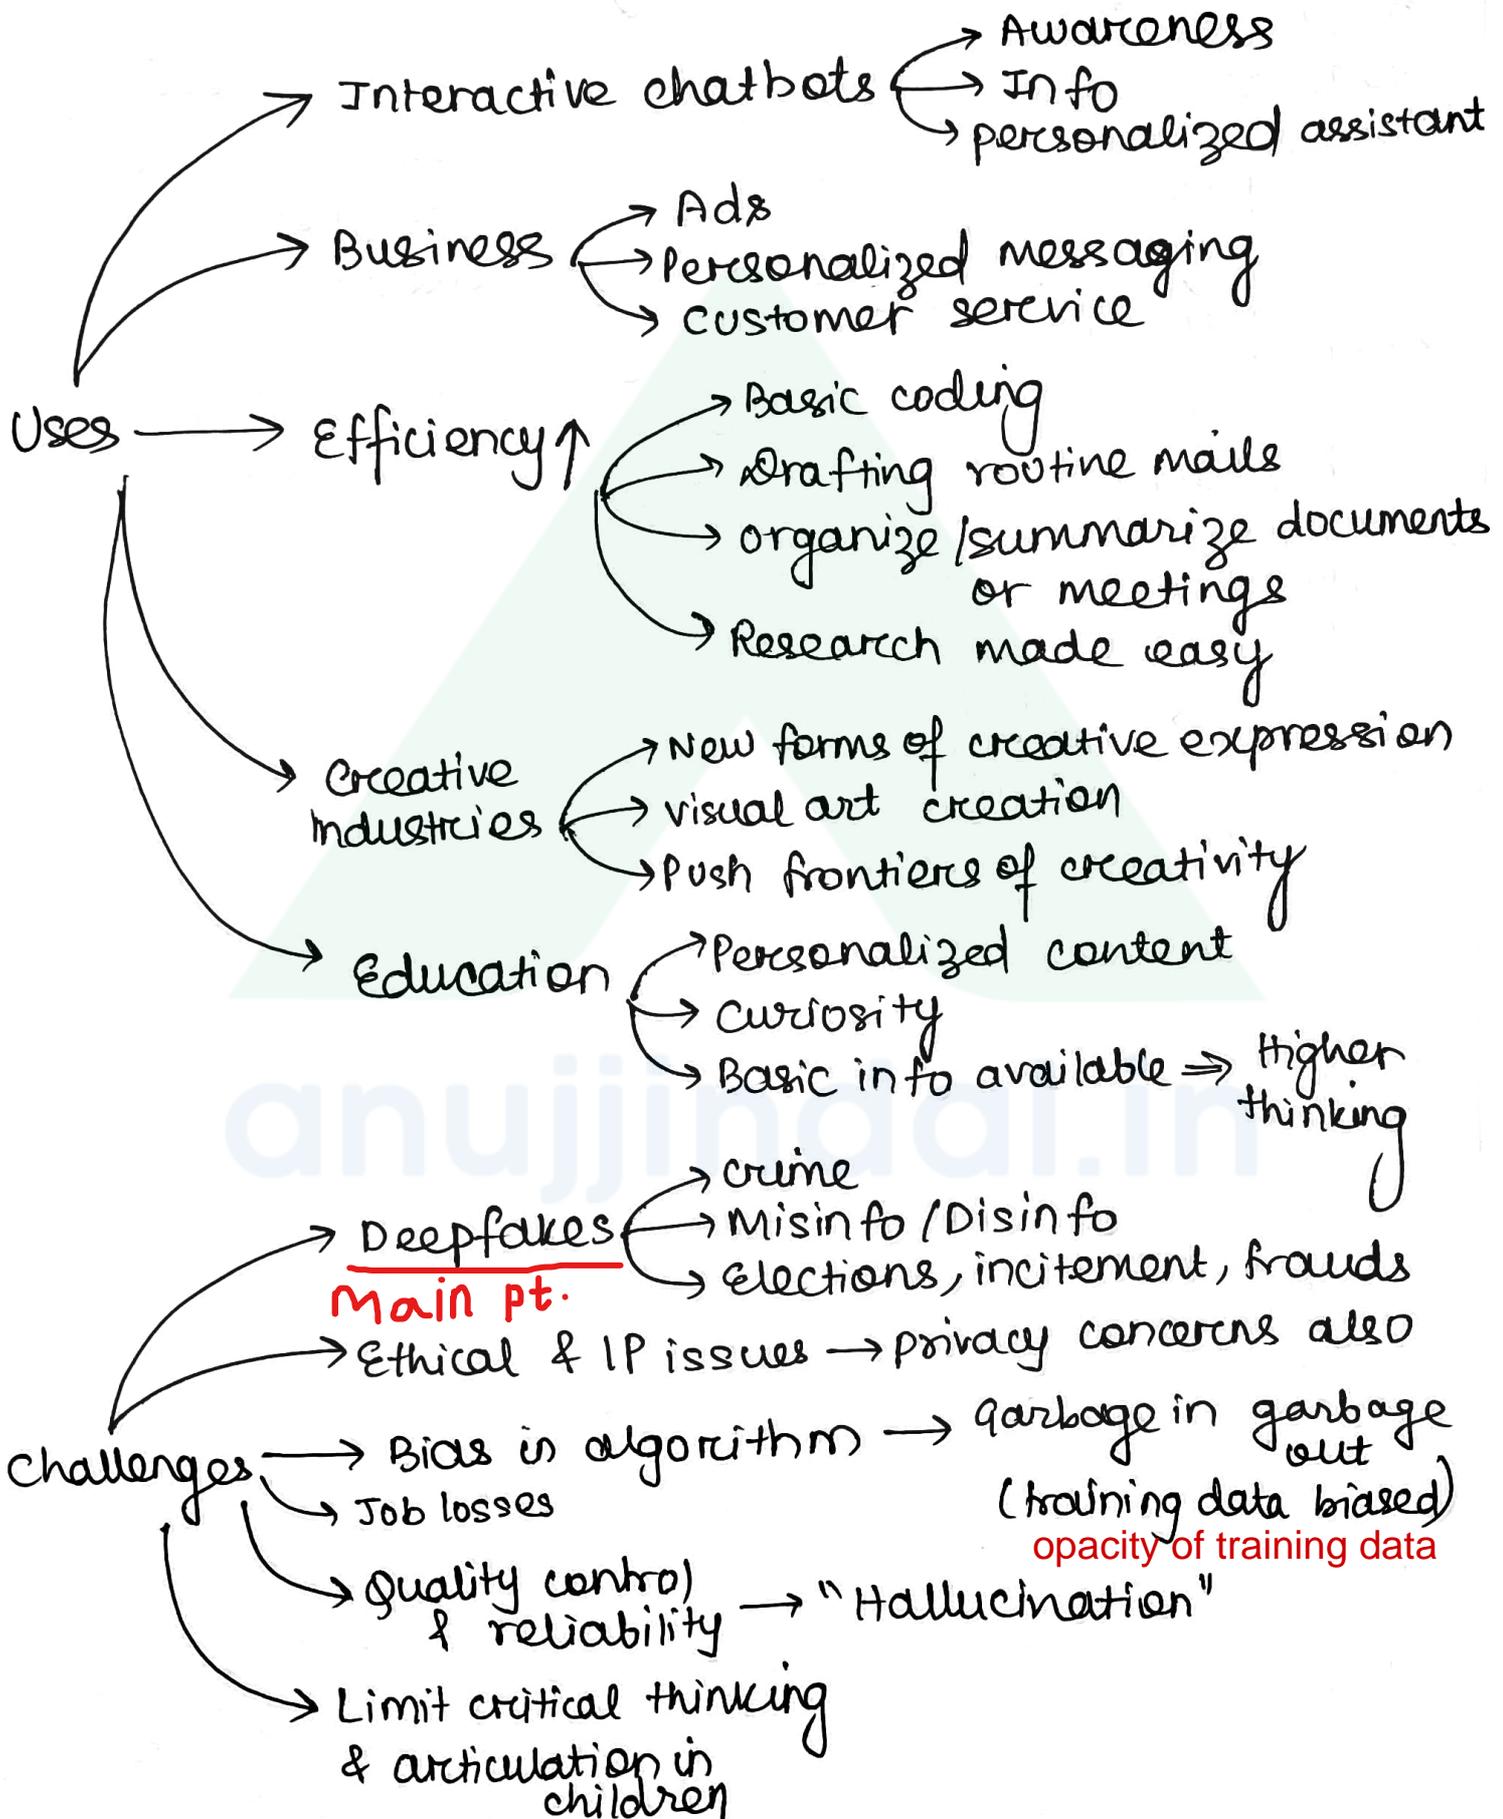

put in place an AI regulator on the lines of SEBI

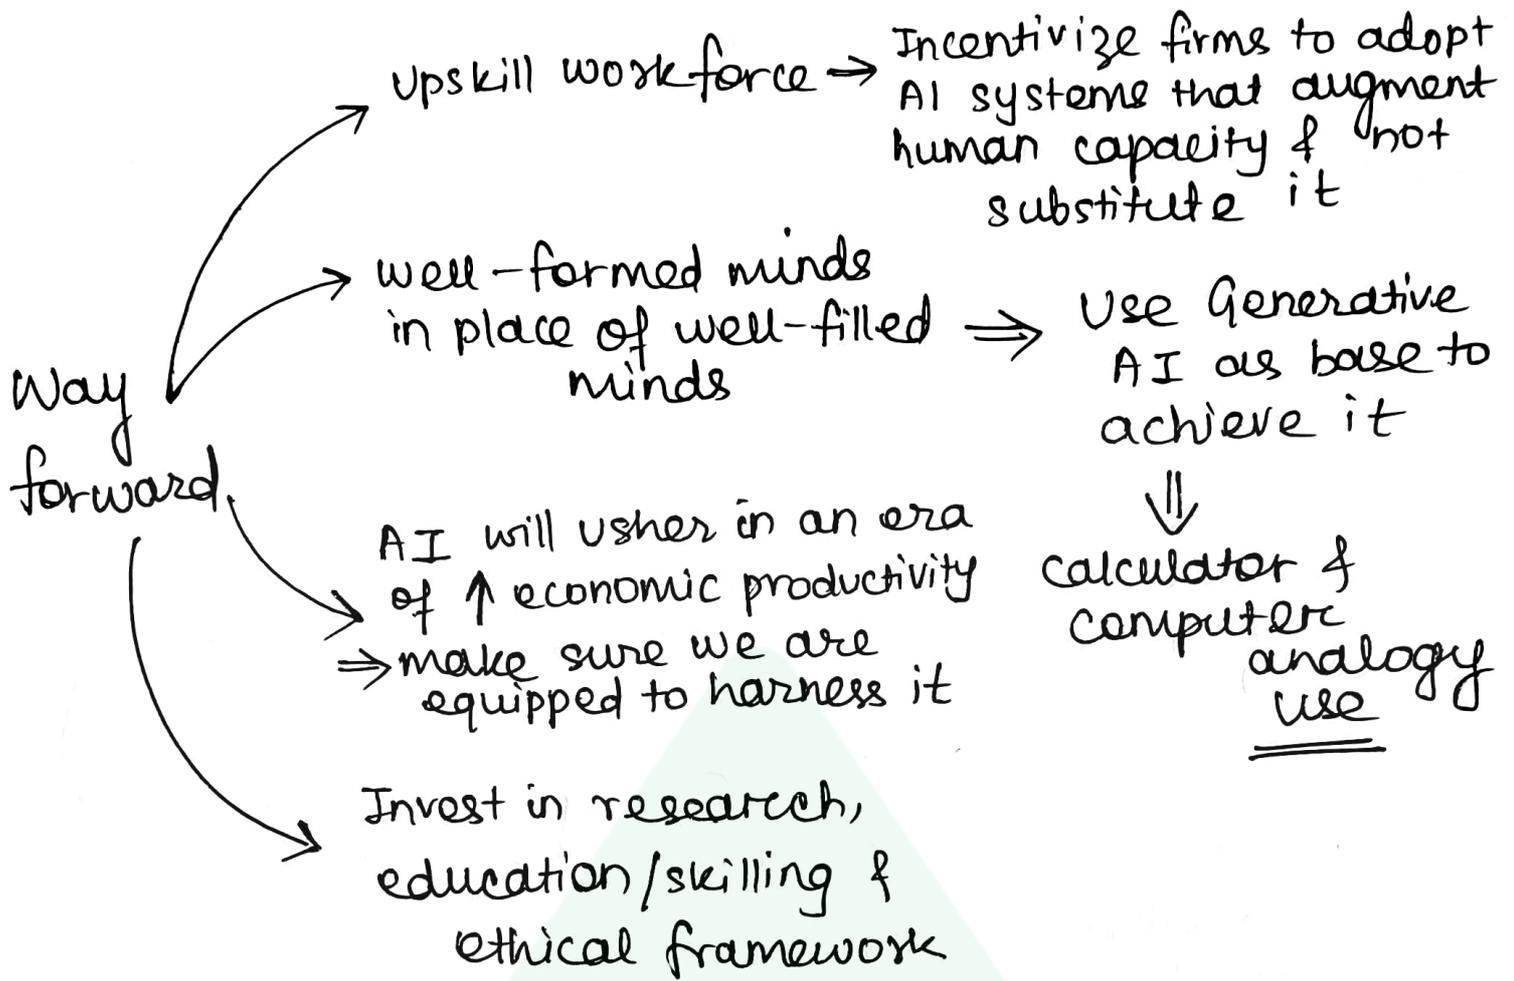

↓
Dynamic regulation

↓
understands AI, monitors evolution & responds

Generative AI

Defn → cutting edge tech dev. that utilizes AI/ML to create new forms of media (text, audio, video, animation) with simple texts called prompts

AI is a technology in search of a philosophy.
